How to Create Your Web3 Wallet

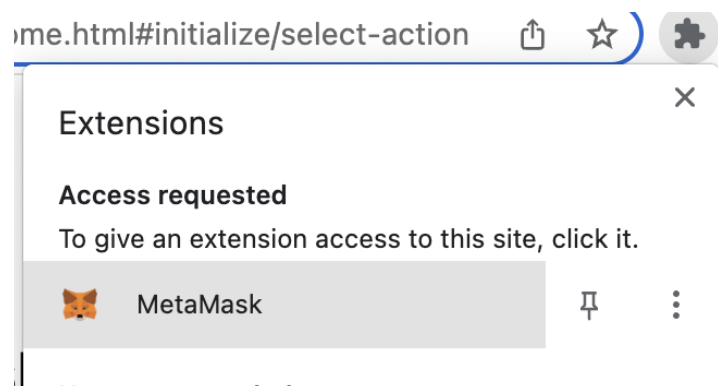

A web3 / digital wallet allows you to interact with web3 applications and is necessary to store your NFTs. [Metamask](#) is one of the most commonly used web3 / digital wallets available, with a simplified user interface. If you are new to NFTs, we recommend you use a Metamask wallet.

In this guide, you will learn how to create a Metamask wallet for your NFTs. This wallet can be also used to store any NFTs you may purchase in future.

1. Download and install the [Metamask browser extension](#). Check the URL and make sure you are installing from <https://metamask.io>

2. After Metamask is installed, go to the Metamask extension.

3. Click on "Get Started", then "Create a Wallet".
4. Read through the next page and agree to the prompts.
5. Create a new password. This password will be used every time you want

to access your wallet in the same browser. Please keep this password secure. Never reveal your password to anyone.

6. On the next screen, watch the video to learn about the “seed phrase” and ways to keep your wallet secure.
7. Metamask will now show you your newly generated seed phrase. Carefully copy down each word in the order they are presented and keep this set of words in a safe place. Never reveal your seed phrase to anyone.
8. Once you have confirmed your seed phrase, you have now created your wallet.
9. Your public wallet address can be found by clicking the extension (example shown below). It starts with "0x" followed by 40 characters from 0 to 9, a to f.

When you copy and paste this, please double check to see that what has been pasted is identical to your wallet address.
